The annual GIS in Central Asia - GISCA 2015 Conference is scheduled for May 14-16 in Tashkent, Uzbekistan and has announced Call for Papers and registration. The main objectives of this English language conference are to bring together GIS academics, researchers and practitioners from the Central Asian and other countries and to encourage international cooperation and knowledge exchange in GIS education. GISCA has reached its 10-year anniversary and is at the core of a Central Asian community of (best) practice, sharing experiences from different application do-mains across this region.

In 2015, GISCA is focused on the theme of "Geospatial Management of Land, Water and Resources". GIScience as a conceptual foundation, Geoinformatics as a methodology and GIS as software are powerful instruments for linking information from different sources by location. This is exactly what is needed to manage our environments and natural resources, and to assess risks arising from natural, technical and social factors.
